Atticus Trade, Inc. Financial Projections

Sources and uses of funds, model assumptions, and 24-month base-case projection. August 2026.

Sources and Uses: Angel Collateral Pilot ($25,000 capped SAFE)

ITEM	AMOUNT	NOTE
SOURCES		
Angel SAFE (this raise)	$25,000	Post-money SAFE: $4,000,000 valuation cap, 20% discount
Existing company cash (founder funded)	$6,000	Remaining from $50,000 of founder capital contributed since inception
Total sources	**$31,000**	
USES		
Options margin collateral (segregated OKX sub-account)	$25,000	Collateral, not spend: recycles daily, verifiable by independent read-only API, 40% never allocated
Operating costs, 12 months	$3,600	Hosting, infrastructure, tooling, data; no salaries; no hires this round
Contingency reserve	$2,400	
Total uses	**$31,000**	

The raised capital serves as options margin collateral backing customer protection. It is consumed while a protection cycle is open and returns at each daily close, so the same capital supports a book that recycles daily. It remains venue-verifiable at all times.

Model Assumptions

DRIVER	VALUE	BASIS	SOURCE
Gross credit rate at block execution	8.5 bps/day	Measured	Simulation tape at $50,000 scale; retail-size fills run lower, block RFQ measured 2 to 5x better
Atticus take rate, standard	20%	Published	10% for the first 50 founding wallets
Blended take rate used in model	18%	Estimate	Mix of founding and standard wallets from month 4
Margin per protected dollar, 1:1 coverage	12%	Measured	OKX margin simulator
Portfolio margin netting factor	0.078	Measured	33-day shadow facility window; portfolio margin activation is milestone 2 of this round
Collateral safety buffer, never allocated	40%	Policy	Enforced in code; utilization auto-pauses before the buffer is touched

Protected book supported by $25,000 at 1:1	$125,000	Derived	$25,000 x 60% usable / 12% margin
Protected book supported under portfolio margin	$400,000	Estimate	Conservative relative to the measured netting factor; applied from month 4
Book utilization ramp	20% to 80%	Estimate	Months 1 to 12, as the founding cohort fills and embedded partners launch
Operating costs per month	$300	Estimate	Hosting, tooling, data; no salaries in this period

24-Month Projection (base case)

Revenue = protected notional x credit rate x take rate. Months 1 to 3: 1:1 coverage on pilot collateral. Month 4: portfolio margin activation. Month 10: first embedded distribution partner live (conversations active). White-label revenue share, lender channels, and treasury channels are excluded from this model.
