Floor. Cap. Cash today.

A user holding a position on your venue taps **Lock in**. The position now ends at a **floor** or a **cap**, and part of it is **paid in cash today**. Atticus prices it and buys the other side on a public book, leg for leg. You keep the flow, the ledger and the customer. Atticus never holds funds.

THE NUMBERS TO CARRY · LIVE SINCE SEP 12, 2026

739
positions settled on official results

$0
gap between our P&L and the published take

42%
floor saves: 314 users finished above the unprotected outcome

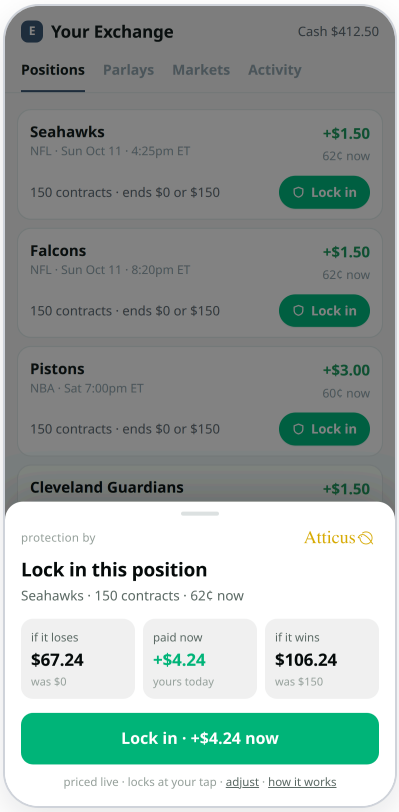

$2,395.08
paid to users at the tap, on $110,850 of stake

1.3%
realized cost of protection on 350 settled games (2.4% with crypto strikes)

91,478
contracts put on public books in the last 30 days, $42,139 of flow

$287.97 our P&L
$287.97 take booked

Same number, to the cent, on all 739 settled positions. We earn the published take (0.26% of stake) and nothing on the result: the hedge pays the floor, the cap slice pays the hedge, and nothing depends on who won. Every row is public, in integer cents, with the quote and the settlement beside it.

Their shell, our sheet. Two endings and the cash paid now, priced live, locked at the tap. The venue name is a placeholder.

WHY A VENUE ADDS THE BUTTON

A third choice beside hold and cash out
Cash out sells the whole position at the spread. The lock keeps it: a floor, upside to a cap, cash today.

Revenue with no outcome risk
A published take on every protected position, shared with you. Our P&L equals that take whoever wins.

Integration in days
One JSON quote in, one receipt out. Your brand, your ledger, your official result. Nothing custodial.

PARLAYS

A parlay is a long shot when bought; no honest floor can be priced on it. Once every pick but one has hit it is a position on **one game at one game's odds**, which is what the layer prices. So the lock appears at the last pick and nowhere before, and the record shows lock against sell against hold on every ticket that got there.

RECORD

atticus-event-shadow.onrender.com

Every number on this page, live. Identity card at the top; CSV at /api/shadow/positions.csv, one row per position in integer cents.

DEMO

event.earnandprotect.xyz

Tap Lock in on any row. Add ?tab=parlays for the parlays. The venue name is a placeholder; your brand goes there.
