

Atticus -> Bullish

Execution brief | 13 Aug 2026 | BD + market makers | Michael William | michael@atticustrade.com
Live tape: facility.atticustrade.com/onesheet

OKX fee on this book: \$523 on \$3.45M = 1.52 bps
Regular options tier, on-screen. Institutional KYB. No IM posted. No VIP. Live path: RFQ + portfolio margin. First live flow is uncommitted.

TAPE · 24 DAYS THROUGH 13 AUG

Real venue options prices. Client settlement is paper. 1 live principal leg; paper stand-ins disclosed. Neutral pairs only since 5 Aug. Directional overlay retired.

	Full window	Product book (since 5 Aug)
Days	24	8
Settled	69 names	26 names
Notional	\$3,450,000	\$1,300,000
Avg hold	24.13h	~24h
Structure net	\$2,544	\$1,033
Credit / givebacks	\$2,976 / \$432	-
Client all-in	9.33 bps 79% days +	-
Floor / cap	0.0% / 2.9%	0 / 0
Halts / manual	0 / 0	0 / 0
Integrity	100% signed + reconciled	same
Option fees accrued	\$523 · 1.52 bps	in full window
Net after fees + capital (0 ops fee)	-\$12.42 · -0.036 bps	pass-through

Quoted credit 10-16 bps/day at smallest tier. Realized 9.33 bps. Scale improves this.

FLOW FOR MMS

Two-sided 24h BTC collar: buy the floor, sell the cap. Uninformed, mechanical, ~1 DTE, rolled daily. Not a directional book. No self-match - pair spans two perp venues. You price and fill the hedge.

Typical name	\$25k-\$100k notional
Execution now	On-screen / CLOB (shadow)
Live	RFQ / block first, sanity-check vs screen, portfolio margin
Unwind	Reduce-only IOC + RFQ / block
Breaks a fill	No 1-DTE strike past ~4-5% of spot; thin wings; RFQ timeout

OKX FEES · THE NUMBER YOU ASKED FOR

Accrued at Regular on-screen on real books. Not cash - no IM posted, shadow does not bill. Benchmark: worst published OKX options tier, before RFQ or VIP. fee = min(rate x notional, 7% x premium). Regular = 3.0 bps maker / 3.0 bps taker, 7% premium cap. Headline 3.0 bps; we realized 1.52 bps across both legs (~0.76 bps/leg, ~\$7.58/name) because the cap binds on cheap 1-DTE premium. After fees and capital, structure is flat at zero ops fee - no pad. OKX combo/RFQ can cut fees up to 50%; unused. First live orders are RFQ.

\$100k name, 12 bps premium = \$120

	Math	Fee	Effective
OKX Regular (us)	min(3.0 bps x \$100k, 7% x \$120)	\$8.40	0.84 bps/leg
OKX VIP 5 taker	same cap still binds	\$8.40	0.84 bps/leg
Bullish CLOB published	min(1 bp notional, 10% of premium)	\$10	1.0 bp/leg

Published CLOB taker does not beat this once the cap binds. Bullish wins on spread + RFQ/block + rebate + MM quotes on this 1-DTE collar + PM, vs 1.52 bps all-in and current on-screen fills.

NEXT

Not a second live shadow. On request, 5 business days: quote overlay of last ~25 tape collars vs Bullish mainnet (CLOB + RFQ). Table: fillable Y/N, strike, all-in vs OKX, size that walks. No SimNext.

1. Rebate / maker terms - CLOB and RFQ/block
2. Intro to the MM you want to show this
3. 1-DTE BTC: CLOB vs RFQ, USD vs USDC, strike grid and top-of-book around +/-2% / +/-5% / +/-10%
4. Onboarding: entity, min size, time-to-live, PM on a long-floor / short-cap 1-DTE pair

Live routing follows terms. We can sit with your MM on this sheet as soon as you set it.
