

One-click, non-custodial downside protection — embedded in your UI.

Live market snapshot

June 16, 2026

\$0 integration cost · \$0 custody change · \$0 balance-sheet risk to Fireblocks.

WHY NOW

Spot ETFs & tokenization are putting **record crypto on-platform** · volatility keeps downside demand high · options liquidity is finally **deep enough to hedge at scale** — and no custodian yet lets clients **execute** protection. The first mover owns the category.

1

HOW FIREBLOCKS WINS

- **New recurring revenue** — volume-tiered rev-share on every hedge. Zero cost, zero balance-sheet risk.
- **First-mover differentiation** — the first platform where clients **execute** protection in one click, not just view risk.
- **Zero added risk — non-custodial**; Atticus takes all market & execution risk.
- **Retention & bigger TAM** — removes the "crypto's too risky" objection for banks, corporates, and treasuries.

2

ECONOMICS — VOLUME-TIERED REV-SHARE ESCALATOR

ANNUAL VOLUME TIER	ATTICUS	FIREBLOCKS
Launch / ramp	60%	40%
Growth	50%	50%
Scale	40%	60%

Share of **net revenue** (premium – hedge cost). Fireblocks' share **grows with volume** — \$0 cost, \$0 balance-sheet risk. Tiers & % fully negotiable.

3

HOW IT WORKS — CUSTODY STAYS WITH YOU

- **1.** Client picks an asset + protection level → live multi-venue quote.
- **2.** One click → Atticus **sources & holds the hedge**. We never touch client funds.
- **3.** Payout to their Fireblocks account — on-touch or expiry; premiums on an agreed schedule.

4

PROTECTION OPTIONS — \$10M BTC (EST., ~MONTHLY TENOR)

OPTION	PROTECTS	CAPS UPSIDE	PREMIUM (EST.)	COST ON \$10M
Zero-cost collar	below –10%	above +10%	≈ \$0	\$0
Floor –10%	below –10%	none (keep all)	~1.5%	~\$154K
Floor –5%	below –5%	none	~3.0%	~\$299K
Floor –2%	below –2%	none	~4.1%	~\$411K

Indicative estimates (Deribit snapshot, BTC \$66,097, ~45-day). Live engine shops **OKX · Deribit · Bullish** and fills at or below these. Tighter floors / longer tenors cost more; put spreads & any level/tenor fully customizable.

5

WHAT CLIENTS SAVE — BTC HISTORY (\$10M, ZERO-COST COLLAR)

BTC DRAWDOWN	UNPROTECTED LOSS	WITH ATTICUS	SAVED
'21 → '22 cycle (–77%)	–\$7.7M	–\$1.0M	\$6.7M
COVID / FTX (–50%)	–\$5.0M	–\$1.0M	\$4.0M
Sharp dip (–25%)	–\$2.5M	–\$1.0M	\$1.5M

Loss capped ~\$1.0M at **\$0 premium** (collar caps upside, not loss — irrelevant in a drawdown). Also protects **ETH · stablecoins · tokenized assets** — analytics shown for BTC.

PROOF

First pilot live — **\$500K protected**. Multi-venue, non-custodial.

NEXT STEP

Risk-free, no-commitment pilot (potential rebate) — **live in weeks, not months** (sandbox ~2 weeks · pilot ~4–6 weeks).

Premiums are indicative estimates (Deribit snapshot, ~45-day tenor) on a \$10M BTC position — live multi-venue sourcing (OKX · Deribit · Bullish) typically fills at or below these; they scale with tenor/depth and rise entering a crisis. Zero-cost collar forgoes upside above the cap (irrelevant in a drawdown). USDC/parametric cover firmed via reinsurance. Economics use premium-volume estimates, not Fireblocks data. Refresh quotes before distribution.
